

4-7-88

Metting on Meadowville Problem.

Ramont Judd - Attorney representing the Westons. (Frank).
Sharon Weston.

according to Ramont C.

1955 concerns over creek trib to Meadowville Creek.
hearing before Judge Jones.

Civil # 406 → Nov. 1956 continued for Nov. 1957 to gather more info.
injunction against but made a specific finding that reservoir in use
use of reservoir. by J.N. Cook was illegal. water comes from
Cheney Creek.

Mar. 58 Subsequent hearing - minute entry
findings of conclusion. + interlocutory
order for 1958. didn't specifically address the
reservoir.

Cook later asked for + received an application a storage right.

April 64 - Ciddell gave Cooks a priority of Feb. 58
for the reservoir. - essentially trying to overturn judge's decision.

This was not entered or presented at the March
1958 hearing - State Engineer to present a report to court.
This note was in connection with change application
submitted by Cook.

Westons' right has a priority of 1863 - somehow
Cookes have tried to work the priority of their right
back to 1863.

check on report.

Report never was given to court from State Engineer.

item is and book are probably erroneous. - year round storage.

Look at microfilm to see history & period of all enlargement.

judge ordered State Engineer to distribute water

Report of distribution never were completed apparently.

Westons contend reservoir on Cheney Creek should not be filled - his hours are as shown in the White Book.
Jones remarks refer to White Book

Since then there have been some "games" play with the tributary creeks which have had a real impact on ~~Cheney~~ the Westons.

State Engineer should intervene to make sure the interests of all the parties involved are protected - Distribute water according to judge's directions ~~to~~ (see 8d Court order)

⇒ stronger distribution system.

Feel the State Engineer can't do anything different than court order without the approval of the Court.

Problem has never been resolved in the courts.

* May 8, 2004 Take a trip to visit Reservoir and then get an answer back to them with in a certain time frame.

Feb. 2, 1958

Priority schedule seems to be all screwed up?

Sems to be skewed against the Weston and as far as we can see was never presented to judge

When did the red book come out - 1964? and seems to follow in part the priority schedule done in 1958,

How was distribution schedule derived?

What is the status of the red book in the 23 area?

Ask John Mayle what the state engineers authority was to approve a change order on 23-1616 allowing the reservoir after the judge said it was illegal (denied standard).

Administrative Rules
